

Risk Management Booster: Getting Back to Standardized Risk Management Principles

The practice of medicine has transformed dramatically over the past two years resulting in many changes, including how physician practices deliver services. This program is a timely refresher of practice management basics and focuses on privacy obligations under the Health Insurance Portability and Accountability Act (HIPAA), workplace violence, and quality improvement measures. As physician practices continue to adjust, it may be time to re-evaluate and update standardized risk management practices designed to improve patient safety and decrease the likelihood of future medical professional liabilities.

Objectives

- Identify and address the evolving risks in current healthcare practices.
- Analyze current quality and risk reduction strategies to the delivery of patient care.
- Apply established risk management principles to new and emerging risks.

Participation May Qualify Your Physicians for Premium Savings

Your physicians may be eligible for a two percent premium credit if you take the full two-hour program. The majority of your practice's physicians must also take a separate ProAssurance physician seminar to qualify. We encourage you to contact your ProAssurance representative to see if your practice qualifies for this two percent premium credit under our comprehensive system of discounts for loss prevention seminars.

Premium credits are subject to approval by the applicable state insurance department and are applied at renewal of your practice's medical professional liability insurance policy.

Programs + Presenters:

HIPAA Privacy Rule
